June-2011

Detailed Syllabus

Of

M. Sc. Programme
In Electronics

P. G. Department of Electronics & Instrumentation Technology
University of Kashmir
Hazratbal, Srinagar-6, J & K
### Course Structure for M. Sc. Electronics

*Effective from Academic Session - 2011*

#### Semester: First

**Grand Total: 700**
Semester - I

Course No. ELE-101           Marks: 80

Engineering Mathematics

Unit I: Fourier Transform            (10 Lectures)

Unit II: Laplace Transformation      (10 Lectures)

Laplace transforms & its properties, Inverse of Laplace transform by partial fractions, solution of second order differential equation using Laplace transform, Application of Laplace transform in Electrical Networks.

Unit III: Function of Complex Variable (10 Lectures)

Analyticity of Complex variables, Cauchy Riemann Conditions, Cauchy integral Theorem, Laurent's Series, Singularities, Poles, Residues, Residue Theorem, Contour integration for Trigonometric functions (0 to 2\(\pi\)) , Contour Integration for functions (-\(\infty\) to +\(\infty\)), Application of Functions of Complex variables in System Stability.

Unit IV: Numerical Methods           (10 Lectures)

Text Books:

References:

1. Numerical Methods for Engineers and Scientists by A.C. Bajpai, I. M. Calus and J. A. Fairley, John Wiley & Sons
4. Numerical Methods for Engineers by Steven C. Chapra and Raymond P. Canale, TMH
5. Fourier Transformation and Laplace Transformations, Schaum Series Book, TMHCourse
Semester - I

Department of Electronics & Instrumentation Technology, University of Kashmir.

Page: 5

No. ELE-102            Marks: 80

Circuit Analysis and Synthesis

Unit I: Graph Theory and Network Equations (10 Lectures)

Definition of Node, Branch, Graph, Sub-Graph, Path, Loop, Tree, Link and Twig, Isomorphism, Network Matrices, Incidence Matrix, Loop Matrix, Fundamental Loop, Cut-Set Matrix, Fundamental Cut Set, Relationship between Matrices, Formulation of Network Equations on the Loop and Node pair voltage bases, Fundamental Loop Mesh Equations, Nodal equations, Nodal Admittance, Source Transformations, Tellegen’s Theorem and its Applications.

Unit II Two Port Parameters (10 Lectures)

Various Two Port parameters, O. C. Impedance and S. C. Admittance Parameters, h-parameters, chain Parameters, Image Impedance, Applications of various Two port Parameters to T and π networks, Relationship between different two port parameters, Interconnection of Two port equivalent networks, Indefinite Admittance Matrix.

Unit III: Network Functions and Responses (10 Lectures)

Unit IV: Passive Network Synthesis (10 Lectures)

Introduction to passive network synthesis, Causality and stability, Hurwitz Positive Real Function (PRF), Basic Synthesis Procedure, Synthesis by inspection method, LC Immittance Functions (realized by Foster-I and Foster II form, Cauer-I Form, Cauer-II Form), RC Impedance Function, RL impedance , RC Admittance Functions.

Text Books:

References:

1. Circuit Analysis with Computer Application to Problem Solving by Gupta, Bayless and Piekari, Wiley Eastern Ltd, New Delhi
4. Networks & systems by Ishfaq Hussain.
Course No. ELE-103  
Marks: 80

**Semester-I**

**Course No. ELE-103**

**Linear Integrated Circuits and Applications**

**Unit I: Operational Amplifier and Applications**  
(10 Lectures)

**Unit II: Wave Shaping and Wave Generators**  
(10 Lectures)

Comparators, Applications of comparators, Regenerative comparators (Schmitt-trigger), Square wave and triangular wave generators, pulse generators, voltage time-base generators, Step (Stair-case) generators, Sinusoidal Oscillators: Phase shift oscillator, Wien-bridge oscillator, Quadrature Wave Oscillator, Crystal Oscillator.

**Unit III: Converters and Miscellaneous Applications**  
(10 Lectures)

Voltage-to-Frequency and Frequency-to-Voltage Converters, Voltage-to-current and current-to-Voltage converters, Digital-to-Analog (Weighted Resistor, R-2R Ladder Network and IC Type) and Analog-to-Digital Converters (Flash, Successive Approximation, and IC type), Rectifiers, Clippers and Clampers, Peak Detector, Sample and Hold circuit.

**Unit IV: Timer, PLL and Voltage Regulators**  
(10 Lectures)

**Text Books:**

1. Microelectronics circuits By Sedra and Smith, HRW Publishing.
2. Integrated Electronics By Milliman, McGraw Hill Book Company
3. OP- Amp and Linear Integrated Circuits by R. A. Gayakward, Prentice Hall of India Ltd.

**References:**

1. Operational Amplifiers and Linear Integrated Circuits by Robert F. Coughlin and Frederick F. Drisiol, Gayakward, Prentice Hall of India Private Ltd.
Course No. ELE-104  
Marks: 80

Semester- I

Analog Communication Systems

Unit I: Analysis and Transmission of Signals  
(10 Lectures)

Classification of signals, some useful signal operations, Signal Comparison: Correlation and Convolution, Convolution theorems, Signal representation by Orthogonal Signal Set, Aperiodic signal representation by Fourier Integral, Transform of some useful functions, some properties of Fourier Transform (Time Scaling Property, Frequency shifting property, Time shifting property), signal transmission through a linear system, ideal and practical filters, signal distortion over a communication channel, Concept of Distortion less Transmission through a system, signal energy and energy spectral density, signal Power and Power spectral density, relation between power spectral density and auto correlation.

Unit II: Amplitude (Linear) Modulation 
(10 Lectures)

Unit III: Angle (Exponential) Modulation 
(10 Lectures)

Unit IV: Performance of Analog Communication Systems 
(10 Lectures)

Text Books:

References:

Department of Electronics & Instrumentation Technology, University of Kashmir. Page: 7
Course No. ELE-105
Semester- I
Marks: 80

Microprocessors: Architecture, Programming and Interfacing

Unit I: Introduction to Microprocessors (10 Lectures)

Unit II: Programming (10 Lectures)
Introduction to Programming, Various level of Programming, Assembly language programming, Assembler, Linker, Debugger, Instruction set of 8086 Microprocessor, Data transfer instructions, Arithmetic and Logical instructions, Branch Instructions, Processor control instruction, String operation instructions. Assembly language Programming for 8086 microprocessor. Use of Procedures and Macros in ALP. Use of low level features of C language.

Unit III: Interrupts (10 Lectures)

Unit –IV: Interfacing (10 Lectures)
Peripheral Devices and Interfacing, Introduction to memory and its types, Memory Device specifications, Memory interfacing, Memory mapped and I/O Mapped Schemes, Use of Decoders, Even and Odd Addressing. Data Transfer Schemes, I/O Interfacing, Isolated and Memory Mapped I/O instructions, Ports. Study of Peripheral chips: Features, Block Diagram, Control & Status Registers, Operating Modes, Interfacing & Programming of: 8255 Programmable Peripheral Interface, 8237/8257 Programmable DMA controller, 8254 Programmable Interval timer, DAC0830 Digital to Analog Converters, ADC0804 Analog to Digital Converters, 8279 Keyboard and Display Controller, 8251/16550 (USART), Overview of 8087 co-processor.

## Laboratory – I

### Section I. (Experiments on Basic Analog Electronics)

<table>
<thead>
<tr>
<th>S. No</th>
<th>Title of Experiment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Implementation of the following logic gates using Diodes/BJT’s.</td>
</tr>
<tr>
<td></td>
<td>I) NOT II) AND III) OR IV) NAND V) NOR</td>
</tr>
<tr>
<td>2.</td>
<td>To study and design an RC coupled amplifier using BJT and FET.</td>
</tr>
<tr>
<td>3.</td>
<td>To Verify that in a current mirror, the output current is equal to input current.</td>
</tr>
<tr>
<td>4.</td>
<td>To measure the following parameters of 741 op-amp IC.</td>
</tr>
<tr>
<td></td>
<td>I) Open-loop gain, II) Output Offset voltage, III) CMRR, IV) Slew rate.</td>
</tr>
<tr>
<td>5.</td>
<td>Using op-amps design the following:</td>
</tr>
<tr>
<td>6.</td>
<td>Using op-amps design the following:</td>
</tr>
<tr>
<td>7.</td>
<td>To study the frequency response of op-amp using its pole model.</td>
</tr>
<tr>
<td>8.</td>
<td>To design and realize voltage to current converter using op-amps with</td>
</tr>
<tr>
<td></td>
<td>I) Floating load, II) Grounded Load, and also find its conversion factor.</td>
</tr>
<tr>
<td>9.</td>
<td>To design and realize current to voltage converter and also find its conversion factor.</td>
</tr>
</tbody>
</table>

### Section II. (Experiments on Advanced Analog Electronics)

<table>
<thead>
<tr>
<th>S. No</th>
<th>Title of Experiment</th>
</tr>
</thead>
<tbody>
<tr>
<td>10.</td>
<td>To study and design AC coupled amplifier using op-amp.</td>
</tr>
<tr>
<td>11.</td>
<td>a) To design and realize 1st order LP, HP filters using op-amp and compare their theoretical and practical values of cut-off frequency.</td>
</tr>
<tr>
<td>12.</td>
<td>b) To design and realize 1st order BP and BR filters using 1st order LP and HP filters. Compare the theoretical and practical values of $\omega_0$.</td>
</tr>
<tr>
<td>13.</td>
<td>Study &amp; Design Sample &amp; Hold circuit.</td>
</tr>
<tr>
<td>14.</td>
<td>a) To design and realize analog to digital converters using Op-Amp.</td>
</tr>
<tr>
<td>15.</td>
<td>b) Study of ADC Chips (AD0808)</td>
</tr>
<tr>
<td>16.</td>
<td>a) To design and realize digital to analog converters using Op-Amp.</td>
</tr>
<tr>
<td>17.</td>
<td>b) Study of DAC Chips (DA0808)</td>
</tr>
<tr>
<td>18.</td>
<td>Study analog multiplexer 4066/4051 IC for parallel to serial conversion.</td>
</tr>
<tr>
<td>19.</td>
<td>To design and realize Log and exponential amplifiers using Op-Amps.</td>
</tr>
<tr>
<td>20.</td>
<td>To design and realize OA (741IC) as Schmitt trigger and measure its hysteresis.</td>
</tr>
<tr>
<td>21.</td>
<td>a) To design and realize OA based Clipper and Clamper.</td>
</tr>
<tr>
<td></td>
<td>b) To design and realize Op-Amp based full wave and half wave precision rectifier.</td>
</tr>
<tr>
<td>22.</td>
<td>To design and realize OA based pulse generator.</td>
</tr>
<tr>
<td>23.</td>
<td>To design and realize voltage controlled oscillator using op-amp.</td>
</tr>
<tr>
<td>24.</td>
<td>(a) To design and realize a square wave generator using OA.</td>
</tr>
<tr>
<td>25.</td>
<td>(b) To design and realize Wein-Bridge Oscillator using OA.</td>
</tr>
<tr>
<td></td>
<td>(c) To design a RC phase shift oscillator using Op-amp of a particular frequency.</td>
</tr>
<tr>
<td></td>
<td>To study the 565 IC in free running mode &amp; also compare the theoretical &amp; practical values of Lock-in range, Pull-in range, Free running frequency.</td>
</tr>
<tr>
<td>26.</td>
<td>To design and test a frequency synthesizer using PLL 565 IC.</td>
</tr>
<tr>
<td>27.</td>
<td>555 Timer as Astable and monostable vibrator</td>
</tr>
</tbody>
</table>
### Section III. (Experiments on Electronic Communication)

<table>
<thead>
<tr>
<th>S. No</th>
<th>Title of Experiment</th>
</tr>
</thead>
<tbody>
<tr>
<td>28.</td>
<td>(a) Study of Four quadrant Analog multiplexer IC’s.(AD633/AD734)</td>
</tr>
<tr>
<td>29.</td>
<td>(a) Design and realize AM modulator using Square Law modulator and calculate its modulation index and power.</td>
</tr>
<tr>
<td></td>
<td>(b) Design and realize AM detector using Square Law detector and Envelope detector.</td>
</tr>
<tr>
<td>31.</td>
<td>(a) Design and realize DSB-SC signal Modulator using Analog Multiplier.</td>
</tr>
<tr>
<td></td>
<td>(b) Design and realize DSB-SC signal demodulator using Coherent detection and Squaring loop.</td>
</tr>
<tr>
<td>32.</td>
<td>Simulation of SSB-SC modulator and demodulator using MATLAB/Simulink.</td>
</tr>
<tr>
<td>33.</td>
<td>Simulation of Hilbert transformer and VSB filter using MATLAB/Simulink.</td>
</tr>
<tr>
<td>34.</td>
<td>(a) Derivation of modulation index in case of FM signal.</td>
</tr>
<tr>
<td></td>
<td>(b) To design and realize Direct method of FM generation and calculate its frequency deviation and modulation index.</td>
</tr>
<tr>
<td>35.</td>
<td>To study and realize VCO as a FM generator.</td>
</tr>
<tr>
<td>36.</td>
<td>To study and realize Phase locked loop FM generator.</td>
</tr>
<tr>
<td>37.</td>
<td>To study and realize Astable multivibrator as FM generator.</td>
</tr>
<tr>
<td>38.</td>
<td>To study and realize frequency discrimination method for FM demodulation.</td>
</tr>
<tr>
<td>39.</td>
<td>To study and realize PLL as FM detector.</td>
</tr>
<tr>
<td>40.</td>
<td>To study &amp; realize Op-amp based Pre-Emphasis &amp; De-Emphasis circuits.</td>
</tr>
<tr>
<td>41.</td>
<td>Field study/ Visit to Radio Kashmir Sgr. &amp; local exchange.</td>
</tr>
</tbody>
</table>

### Section IV. (Experiments on Circuit Analysis)

<table>
<thead>
<tr>
<th>S. No</th>
<th>Title of Experiment</th>
</tr>
</thead>
<tbody>
<tr>
<td>42.</td>
<td>(a) Find the branch currents and branch voltages of a given network using mesh analysis and compare them with the theoretical values.</td>
</tr>
<tr>
<td></td>
<td>(b) Find the branch currents and branch voltages of a given network using node analysis and compare them with the theoretical values.</td>
</tr>
<tr>
<td>43.</td>
<td>(a) For a T and [] network find open circuit and short circuit parameters.</td>
</tr>
<tr>
<td></td>
<td>(b) Verify that the overall ABCD parameters of a cascade of two networks are equal to the sum of individual ABCD parameters.</td>
</tr>
<tr>
<td>44.</td>
<td>(a) Study the pole-zero response of a network function using Matlab.</td>
</tr>
<tr>
<td></td>
<td>(b) Study the effect of the variation in poles and zeros on the frequency response of a network function.</td>
</tr>
</tbody>
</table>
| 45.   | Synthesize and realize a given network function using  
  1) Foster form-I/II,  II) Cauer form-I/II. 
  Also verify the results obtained using Matlab. |
| 46.   | (a) For any DC network show that power is maximum when load resistance is equal to the source resistance. Using Matlab plot power, voltage, and current v/s load resistance. |
|       | (b) Plot the response of 1st and 2nd order systems for the following inputs. 
  (i) Impulse (ii) Step and (iii) Ramp. |
Semester- I

Course No. ELE-107

Marks: 80

Laboratory – II

Section I. (Experiments on Digital Electronics)

<table>
<thead>
<tr>
<th>S. No</th>
<th>Title of Experiment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>(a) To design and realize Half and Full Adder Circuits using basic logic gates/universal gates.</td>
</tr>
<tr>
<td>3.</td>
<td>(a) To design a 4-bit magnitude comparator using basic/universal logic gates.</td>
</tr>
<tr>
<td>4.</td>
<td>To design a digital clock using IC’s.</td>
</tr>
<tr>
<td>5.</td>
<td>(a) To design a 4:1 multiplexer and 1:4 de-multiplexer circuits using basic/universal logic gates.</td>
</tr>
<tr>
<td></td>
<td>(b) To implement a 4/5 variable Boolean function using a suitable MUX.</td>
</tr>
<tr>
<td>6.</td>
<td>(a) To design a 2^n to n line encoder using basic universal logic gates.</td>
</tr>
<tr>
<td></td>
<td>(b) To design a control signal generator for 2^n :1 MUX and 1: 2^n DEMUX using decoder.</td>
</tr>
<tr>
<td>7.</td>
<td>(a) Design a BCD to 7 segment decoder using IC’s(7447).</td>
</tr>
<tr>
<td></td>
<td>(b) To design a circuit that can encode a particular sequence and decode the same sequence.</td>
</tr>
<tr>
<td>8.</td>
<td>(a) To design a ROM that can store a particular sequence.</td>
</tr>
<tr>
<td></td>
<td>(b) To implement a 4/5 variable Boolean function using ROM and decoders.</td>
</tr>
<tr>
<td>9.</td>
<td>(a) To design the following flip-flops using universal gates.</td>
</tr>
<tr>
<td></td>
<td>I) S-R flip-flop II) D flip-flop III) J-K flip-flop and IV) T flip-flop</td>
</tr>
<tr>
<td></td>
<td>(b) Study race around condition of J-K flip-flop and design edge-triggered J-K-flip flop and M/S flip-flop to eliminate race around condition.</td>
</tr>
<tr>
<td>10.</td>
<td>(a) To design an n-bit serial adder using full adder and D type flip flop IC’s.</td>
</tr>
<tr>
<td></td>
<td>(b) To design a universal shift register and demonstrate SISO, SIPO, PISO and PIPO functions.</td>
</tr>
<tr>
<td>11.</td>
<td>(a) To design a modulo-n Asynchronous and synchronous counter using JK/T-Flip Flop IC’s.</td>
</tr>
<tr>
<td></td>
<td>(b) To design an up-down synchronous counter with direction control that can count a particular sequence.</td>
</tr>
<tr>
<td></td>
<td>(c) To design Jhonson &amp; Ring counter.</td>
</tr>
</tbody>
</table>

Section II. (Experiments on Programming -Applications to Electronics)

12. a) Write a program to evaluate the sine series using the following formulas:

\[
\sin(x) = x - \frac{x^3}{3!} + \frac{x^5}{5!} - \frac{x^7}{7!} + \ldots
\]

OR

\[
\sin(x) = \sum_{n=0}^{\infty} \frac{(-1)^n * x(2n+1)!}{(2n+1)!}
\]

Use recursive function.

13. a) Write a program to evaluate the cosine series using the following formulas:

\[
\cos(x) = 1 - \frac{x^2}{2!} + \frac{x^4}{4!} - \frac{x^6}{6!} + \ldots
\]

\[
\cos(x) = \sum_{n=0}^{\infty} \frac{(-1)^n * x2n}{(2n)!}
\]

Use recursive function.

14. a) To determine the value of a given Resistor from its color Code. 

b) To match a frequency with the various divisions of the frequency spectrum and display its location.

Department of Electronics & Instrumentation Technology, University of Kashmir. Page: 11
c) To check whether a transistor is NPN or PNP.
d) To accept the name of a transistor and output the package type, manufacturer, operating frequency range, and material used.
e) To accept parameters of a transformer and calculate its output voltage.
f) To accept one of the three parameters (peak voltage, average and rms) of a signal and calculate the other two parameters in half-wave and full-wave rectifier along with ripple factor.
g) To accept the changes in the current IB, IC, and IE of a transistor and calculate the current amplification factors in cases of common-base, common-emitter, and common-collector amplifiers.
h) To calculate the extreme points of a load line and operating point using the given parameters.
i) Current flowing through a Semiconductor diode is given by

\[ I_D = I_s \left( e^{v_D/nV_{th}} - 1 \right) \]

Where \( V_D \) is Voltage across diode, \( I_s \) is saturation current, \( n \) is Emission coefficient and \( V_{th} \) is Thermal voltage. Write a program to calculate and plot the current flowing through the diode for voltages from –4.0 Volts to 1.0 Volts in steps of 0.1.

15. 
a) Write down a program which will convert a decimal number to its equivalent representations in hexadecimal, octal and binary number systems. The program should display the number in all of above number systems.
b) Write a C program that converts a decimal number to its equivalent number in new base. The decimal number and the new base are to be read as command line arguments.

16. Write down a program to compute

a) Equivalent resistance of the resistors connected in
b) Equivalent capacitance of the capacitors connected in
c) Equivalent inductance of the inductors connected in

17. a) Write down a program to calculate the output voltage for Damped Sinusoidal Oscillator.
b) Write down a program to calculate the oscillating frequency of a damped RLC circuit.
c) Calculate the energy stored in an inductor which is given by:

\[ E = \frac{1}{2} \times \text{inductance} \times \text{current}^2 \]

18. Write down a program to calculate the total percentage Harmonic Distortion of a device for the given strengths of fundamental and harmonic components.

19. Write down a program to evaluate \( F(x, y, z) \) which is given as:

\[ F(x, y, z) = \begin{cases} R(x + y), \text{ when } S1 \text{ is on and others are off} \\ R(x + z), \text{ when } S2 \text{ is on and others are off} \\ R(z + y), \text{ when } S3 \text{ is on and others are off} \\ R(x^2 + z), \text{ when } S4 \text{ is on and others are off} \\ R(y^2 + x), \text{ when } S5 \text{ is on and others are off} \\ R(x^2 + z^2), \text{ when } S6 \text{ is on and others are off} \end{cases} \]

Where \( x, y, z \) are the diode, transistor and FET currents respectively and \( R \) is the load resistor for the given specification.

20. Write a program to accept the color code of resistors and sort them in ascending or descending order of their values using arrays.

21. Write a program to read a string and a key. Encrypt the string using this key. Display the encrypted string. In the same program read the key again decrypt the string and display the original string using functions.

22. Write a computational program for solving simultaneous algebraic equations by Guassian Elimination method and use it for solving a given linear network.

Microwave Engineering

Unit-I: Electromagnetic Field Theory (10 Lectures)

Review of Electromagnetics and EM spectrum, Maxwell’s equations in differential and integral form. Equations of continuity for time varying fields, inconsistency of Ampere’s law, Displacement current (Physical interpretations), Time varying field equations Boundary condition, solution of wave equation in free space and conducting media, wave propagation in a lossless & conducting medium, wave Polarization, Reflection and Refraction of plane waves at plane boundaries: Perfect conductor, Perfect dielectric, insulator, surface impedance, Pointing vector and Pointing theorem.

Unit II: Microwave Transmission Lines (10 Lectures)

Transmission Line and Distributed parameters, Basic Transmission line equations, Solutions, Distortions in Transmission line, Condition for Distortion less line, Characteristic impedance, Propagation Constant, Reflection and Transmission coefficients, Standing wave and Standing wave ratio, Impedance matching by Stubs and Tapped Quarter wave line-Transformer, Transmission line as circuit element, Short circuited line, line transmitted by arbitrary load.

Unit –III Micro wave Waveguides and Components (10 Lectures)

Fundamentals of Microwave Waveguides, Rectangular Waveguides, solution of wave equations in rectangular coordinates, TE & TE modes in Rectangular magnitudes, excitation of modes in Rectangular Wave guides, Degenerative & dominant modes, S-Parameters: Microwave Hybrid Circuits: Waveguide tee: E-plane tee, H-plane tee, Magic tee, hybrid rings (rat-race circuits), directional Couplers, S-Matrix of direction Coupler. Circulators and isolators. Microwave filters, Duplexers

Unit IV: Microwave Amplifiers & Oscillators (10 Lectures)

Microwave tubes: lead inductance and Inter electrode capacitive effects Transient angle effect, Gain bandwidth Limitation, Microwave Resonators: Parallel wire and Coaxial Resonators, Cavity Resonators, Klystrons: Multicavity Klystron and Reflex Klystron, Magnetron oscillator (cylindrical), Gunn Oscillator, Gunn Oscillator circuits. Parametric amplifier, Introduction to Strip lines: Micro strip and Parallel Strip lines.

Text Books:

1. Microwave Devices and circuits by Samuel Y. Liao
2. Microwave Principles By Herbert J. Reich
3. Foundations for Microwave engineering by Robert E. Collin
4. Elements of Engineering Electromagnetics by Nannapaneni Narayana Rao
5. Electromagnetic Field theory by Rishab Anand
Course No. ELE-202

Marks: 80

Semester- II

Design and Analysis of Active Filters

Unit I: Filter Approximation Models

Unit II: Active filter synthesis and Sensitivity analysis

Unit III: Transconductance-C filter design

Unit IV: Switched Capacitor filters

MOS switch, Switched capacitor/resistor equivalence, analysis of switched capacitor filter using charge conservation equations, First-order building blocks (Inverting and Non-inverting Amplifier, Integrator and Differentiator), Sampled-Data operation, Switched capacitor first and second order Filters, Switched capacitor High-order filters.

Text Books:

References:

Computer Organization and Architecture

Unit-I: Introduction (10 Lectures)

Unit-II: Instruction and Register Set and Input/output (10 Lectures)

Unit III: Data Representation, ALU and Control Unit (10 Lectures)

Unit –IV: Memory and Storage (10 Lectures)

Text Books:

1. Computer Organization and Architecture by Stallings, PHI.
2. Computer Organization by M. Mano, PHI.
3. Computer Organization and Architecture By Gilmore, TMH.

References:

1. Computer Organization and Design, Patterson Henessney, Harcourt India
Electronic Instrumentation

Unit I: Measurements and Transducers (10 Lectures)

**Fundamentals of Measurements:** General Concepts on Instruments; Introduction to Portable Instruments; Errors, Controlling and Networking of Instruments; Signals and Signal Conditioning; Noise and Interference.

**Transducers:** Classification of transducers, characteristics and choice of transducers; Resistance, Capacitance, Piezoelectric, Thermoelectric, Hall effect, Photoelectric, Techogenerators, Measurement of displacement, velocity, acceleration, force, torque, strain, speed, and sound, temperature, pressure, flow, humidity, thickness, pH, position.

Unit II: Digital Measurements (10 Lectures)

Unit III: Measurement Instruments (10 Lectures)

**Oscilloscopes:** The basic operation of an oscilloscope, advanced techniques: Multiple time bases, Oscilloscopes with dual channels and dual time bases, Use of low cost microprocessor blocks, Digital storage oscilloscopes (DSOs): Sampling techniques, DSO characteristics, Recent developments on DSO techniques

**Spectrum analyzers:** Spectrum Analysis, Types of spectrum analyzer: Real time technique, Fourier transform analyzer, swept tuned analyzer, Superheterodyne spectrum analyzer

**Logic analyzers:** Basic operation of Logic analyzer, Digital circuit testing and logic analysis, Types of analysis.

Unit IV: Biomedical and Analytical Instrumentation (10 Lectures)

**Electrophysiology:** Membranes, Bioelectric Current Loops, Membrane Currents, Membrane Polarization, Action Potentials, Initiation of Action Potentials, Propagation, Stimulation, Biomagnetism.

Text Books:
1. Digital and Analogue Instrumentation testing and measurement, Nihal Kularatna, The Institution of Electrical Engineers, 2003

References:
2. Modern Electronic Instrumentation and Measurement Techniques by Cooper and Helfrick, PHI.
3. Electronic Instrumentations and Measurements by Larry Jones and A. Foster Chin, John Wiley
Course No. ELE-205                           Marks: 80

Semester- II

Power Electronic Circuits and Systems

Unit I: Power Devices (10 Lectures)

Review of switching characteristics of semiconductor devices (Power diodes, BJT’s),
Thyristor construction and characteristics, Methods of turning ON, Turn-off mechanism,
effect of high di/dt and dv/dt, Snubber circuits, Gate triggering circuits, Device
specifications and ratings, DIAC, TRIAC and UJT V-I characteristics, Base drive for BJT.

Unit II: Thyristor Circuits and Applications (10 Lectures)

Controlled rectifiers, AC voltage controllers, Principle of ON-OFF control, Principle of
phase control, Single phase bi-directional controllers with resistive loads, Commutation
techniques: Natural commutation, Impulse commutation, complementary commutation,
external pulse commutation, Load side and line side commutation, Series and Parallel
combination of SCRs.

Unit III: Switch Mode DC to DC Power Converters (10 Lectures)

Principle of step down and step up operation, Performance parameters of DC-DC converters,
Design of BUCK converters, BOOST converters, BUCK-BOOST converters, Forward
converter, Fly back converter, Half-Bridge converter, Push Pull converter and Full Bridge
converter.

Unit IV: Inverters and Cyclo-converters (10 Lectures)

Pulse width modulation techniques, Inverter: Principle of operation, performance parameters
Design of inverters, Single-phase half bridge inverter, Single phase full bridge inverter,
Single phase push pull inverter, Analysis in each case (for resistive and inductive loads),
Cyclo-converters: step up and step down, design of single-phase step down Cyclo-
converters, Power supplies: SMPS, UPS.

Text Books:
1. Power Electronics, Circuits, Devices and Applications by M. H. Rashid, PHI.

References:
2. Introduction to Thyristors and their Applications, by M. Ramamorty.
3. Industrial Electronics and Control by S. K. Bhatchayrya and S. Chatterjee TTTI,

Department of Electronics & Instrumentation Technology, University of Kashmir. Page: 19
Laboratory–III

Section I. (Experiments on Power Electronic Systems)

1. Study switching characteristics of Power transistors and power MOSFETs.
2. To study IV characteristics of SCR and find its break over voltage on state resistance, holding current and latching current.
3. To study IV Characteristics of DIAC and find its break over voltage.
4. To study IV Characteristics of TRIAC.
5. To study IV Characteristics of UJT.
6. To design and realize UJT relaxation oscillator.
7. Thrystor triggering circuits: a) To study RC triggering for SCR, b) To study SCR triggering using UJT.
8. Controlled rectifiers: a) To study and realize half wave controlled rectifiers using SCR. B) To study and realize Full wave controlled rectifiers using SCR.
9. To study AC voltage control using DIAC TRIAC combinations.
10. To study self commutation of SCR.
11. To design and realize step up and step down chopper.
12. To design and realize buck Regulator.
13. To design and realize Boost Regulator.
14. To design and realize Buck-Boost Regulator.

Section II. (Experiments on Design and Analysis of Active Filters)

1. Study of CA3080 OTA chip
2. Design OTA based
   a. Voltage amplifier (I & NI)
   b. Simulated Resistor (Grounded & Floating)
   c. Simulated Inductor (Grounded & Floating)
   d. Amplifier summer
   e. Integrator ( I & NI)
   f. Differentiation ( I & NI)
   g. Gyrorator
3. Design of OTA based low and high order fitters.
4. Designs an OP-amp based GIC and verify it for inductor simulation.
5. Design OP-amp based LP, HP, BP BS and AP filleting function using and study the effect of cascading.
6. Design LC Ladder based 2nd order LP/HP/BP/BS filtering functions using simulated inductance approach.
7. Design LC Ladder based 2nd order LP/HP/BP/BS filtering function using FDNR approach.
8. Study the transformation of a given filtering function into the remaining filtering functions & verify them by using theoretical transformations.
9. Design a 2nd order Chebyshev LP filtering function & compare it with the designed 2nd order Butterworth LP filtering function.
10. Design a 2nd order Inverse Chebyshev LP filtering function & compare it with the designed 2nd order Butterworth & Chebyshev LP filtering function.
11. Design the Sallen-key & GIC-module based 2nd order biquads and study their sensitivity performances with respect to various components.
12. Design a simulated resistor of a givenen value using switched capacitor fitter.
13. Design of Switch capacitor building blocks (Inverting and Non-inverting amplifier, Integrator and Differentiator)
14. Design 1st order 2nd order filtering functions using SCF.
Semester- II

Course No. ELE-207          Marks: 80

Laboratory–IV

Section I. (Experiments on Microwave Engineering)

1. Study of different Microwave guide components.
2. To determine the frequency and wavelength in a rectangular wave guide working on TE 10 mode.
3. To determine the standing wave ratio and reflection coefficient.
4. To measure an unknown impedance with smith chart.
5. To study VI characteristics of Gunn diode.
6. To study O/P power and frequency as a function of voltage in case of Gaunn diode.
7. Study of Magic tee.
8. Study of characteristics of Klystron tube and to determine its electronic tuning range.

Section II. (Experiments on Electronics Instrumentation)

1. Study of temperature transducers: (any 2) RTD, Thermocouple, Thermistor
2. Study of displacement transducers:
   a. Inductive
   b. Capacitive
   c. Resistive
3. Study of weight measurement using strain guage.
4. Study of speed measurement using:
   a. Magnetic pickup
   b. Photoelectric pick up
5. Study of pressure measurement using Bourdan tube.
6. Study of various transducers characteristics (5 Practicals).
7. Measurement of various physical parameters using modules (5 Practicals).
8. Design of Frequency meter.
9. Design of time meter.
10. Design & analyze of Ramp type DVM.
11. Design & analyze staircase type DVM.
12. Design & analyze of SAR type DVM.
13. Design & analyze of Integrator type DVM.
15. Design & analyze of Capacitance meter.
17. Design & analyze of quality factor.
18. Design of digital IC tester.
19. Study of DSO and measurement of electrical parameters using DSP.
20. Study of spectrum analyzer.
21. Study of logic analyzer.

Section III. (Experiments on Computer Organization)

1. To design a voting system using full and parallel adders.
2. To design a 4-bit parallel binary subtractor using adders.
3. To design 16-bit parallel binary adder using 4-bit parallel adders.
4. To design a circuit that can compare two 8-bit numbers and report the result of comparison.
5. To design 4-bit ALU.
Physics of Semiconductor Devices

Unit I: Crystal Structure and Carrier Transport (10 Lectures)

Crystal Structure, Space lattices, Primitive and Unit Cell, Index system for crystal planes, Separation between the parallel planes of a cubic crystal, Description of Schrodinger wave equation, Physical interpretation of wave function, Kroning Penney Model, K-space diagram, Effective mass, Concept of Hole, Derivation of Density of state functions, Fermi-Dirac Distribution function, Carrier concentration at thermal equilibrium, Carrier transport Equation, Decay of photo excited carriers, carrier lifetime, Hall effect.

Unit II: Semiconductor diodes (10 Lectures)

Abrupt and Graded PN junction, Depletion capacitance, Current- voltage characteristics of PN junction, Diffusion capacitance, Junction breakdown phenomenon, Metal-Semiconductor contact, Energy band diagrams, Schottky effect, Current transport based on thermionic Theory.

Unit III: Bipolar and Field Effect Transistors (10 Lectures)

Bipolar junction transistors, current gain parameters, minority carrier distribution and terminal currents, Eber-Moll model, Field effect transistors, JFET and MOSFET- Basic device characteristics with analysis, MOS Capacitors, MOSFET Types- Basic device Characteristics with analysis, Equivalent Circuit.

Unit IV: Microwave and Opto Electronic Devices (10 Lectures)

Text Books:
1. Physics of Semiconductor Devices S. M. Sze, , Wiley eastern Ltd.
Digital Signal Processing

Unit-I: Discrete Time Signals and Systems
(10 Lectures)

Unit-II: Discrete Fourier Transform (DFT)
(10 Lectures)

Unit-III: Theory and Design of Finite Impulse Response (FIR) filters
(10 Lectures)

Unit-IV: Applications of Digital signal processing
(10 Lectures)

Text Books:
Control System Engineering

Unit I: Control Systems and System Representation.  (10 Lectures)

Control Systems, types of control systems, feedback & its effects, linear & non-linear systems, superposition in linear systems, cascade and feed-forward control, Signal Flow Graph modeling of electrical and electronic systems, SISO and MIMO systems, Transfer function calculation using block diagram algebra and signal flow graph methods, Control of Physical Systems: Speed and temperature.

Unit II: Time Domain Analysis of Control Systems  (10 Lectures)

Standard test signals, time response of first order and second control systems, Steady- state and transient response, Transient response specifications, S-plane root location & the transient response, Error analysis, Static and dynamic error coefficients, Controllers: Proportional, PI, PD and PID controllers.

Unit III: Stability and Frequency Analysis  (10 Lectures)

Unit IV: Introduction to Modern Control Theory  (10 Lectures)

State equations, advantages of state space techniques, State space representation of electrical networks, state transition matrix, state transition equations, state diagrams, Block diagram representation of state equations, state space representation from ordinary differential equations, concepts of controllability and observability.

Text Books:
1. Modern Control Engineering by K-Ogata.
2. Feedback & Control Systems by Disteflno, Stubberud and Williams, McGraw Hill International
3. Automatic Control systems by B. C. Kuo.
4. Linear Control System Analysis & Design by D. Azzo, Houfil.
HDL and Digital System Designs

UNIT I: Hardware Description Languages and VHDL (10 Lectures)

UNIT II: Concurrent, Sequential Codes and State Machines (10 Lectures)

Concurrency, Concurrent versus Sequential codes, advantages of concurrent codes, concurrent and sequential statements: WHEN (simple and selected), GENERATE, BLOCK, PROCESS, IF, ELSIF, WAIT, CASE, LOOP, Signal versus Variable, Bad Clocking, Clock Skew, Propagation delays and their modeling, Brief concepts of Finite State Machines (Melay and Moore Machines)

UNIT III: Combinational and Sequential Circuit Design. (10 Lectures)

UNIT IV: System Design and Programmable Logic Devices. (10 Lectures)

Introduction to PACKAGES and COMPONENTS, FUNCTIONS and PROCEDURES, Port Mapping, Digital system design: VHDL modeling of ALU, Pseudo random Number Generator, Traffic Light Controller, Barrel shifter, Programmable Logic Array (PLA), Programmable Array Logic(PAL), Introduction to Complex Programmable Logic Devices (CPLD) And Field Programmable Logic Arrays(FPGA), Advantages of FPGAs, Application Specific integrated Circuits (ASIC), FPGA design flow and Hardware Description Languages.

Text Books and References:
Microcontrollers and Embedded Systems

UNIT–I: Architecture of Microcontroller (10 Lectures)

Micro controllers & Embedded Processors: Microcontroller versus General-purpose Microprocessors, Microcontrollers for Embedded systems, Types of Embedded Systems. Embedded System applications, choosing a Microcontroller, 8051 Architecture: 8051 Microcontroller hardware, input/output pins, ports and circuits, external memory, counter and timer, serial data input and output, interrupts, other members of 8051.

UNIT–II: 8051 Instructions and Programming (10 Lectures)

Addressing modes: immediate and register addressing modes, accessing memory using various addressing mode, Arithmetic instructions and programs: unsigned addition and subtraction, unsigned, multiplication and division, signed members concepts and arithmetic operations, Logic Instruction and programs: Logic and compare instructions rotate and swap instructions. Jump, Loop and call instructions; Loop and jump instructions, call Instructions, time delay, generation and calculation. Single bit instructions and programming: single bit instruction programming, single bit operation with carry reading input pins versus port latch. I/O port programming: I/O programming, bit manipulation.

UNIT – III: 8051 Timer/Counter, Serial Communication and Interrupt Programming (10 Lectures)

Timer/Counter programming: programming 8051 timers, counter programming, pulse frequency and pulse width measurements. Serial communication programming, : Basics of serial communication, 8051 connection toRS232, 8051 serial communication programming. Interrupts programming: Interrupts of 8051; programming timer interrupts, programming external hardware interrupts, and programming serial communication interrupts.

UNIT – IV: Application of 8051 Microcontroller (10 Lectures)

Programmable peripheral interface (PPI)-8255, programming 8255, 8255 interfacing with 8051. Interfacing Key board. Interfacing LED/ LCD, Interfacing A/D & D/A converters, Interfacing stepper motor.

Text Books:
1. 8051 Micro-controller & Embedded system by J.G.Maziddi, Pearson Pub
2. 8051 Micro-controller & ap[lication by J.K.Ayala, Tata MGraw Hill
3. 8051 Micro-controller & ap[lication by R.Kamal, Pearson Pub
Semester- III

ELE-305(E2)          Marks: 80

Soft Computing

Unit I: Overview of Crisp Sets, Fuzzy Sets and Relations          (10 Lectures)

Basic Concepts of Crisp Sets and Fuzzy Sets, Basic Types of Fuzzy Sets, Sets, Representation of
Fuzzy Sets, Fuzzy Relations, Operation on Fuzzy relations, Composition of Relations, Extension
Principle for Fuzzy Sets, Concept and models of Fuzzy logic Circuits-viz. AND, OR and NOT.

Unit II: Fuzzy Logic and Rule based Systems          (10 Lectures)

Overview of classical logic, Multi-valued logic, Fuzzy sets and probability theory, Probability vs.
possibilities, Approximate reasoning, Fuzzy rule based Systems: Structure of Fuzzy rules,
decomposition of compound rules, aggregation of fuzzy rules, Graphical techniques of inferences,
Types of fuzzy rule based models.

Unit III: Introduction to Neural Networks          (10 Lectures)

Biological and Artificial Neurones, Neuron Models: Classification and Linear Separability, X-OR
Problem, Hopfield Networks, Overview of Neural Networks Architectures: Multilayered Feed
forward and Recurrent Networks, Learning: Supervised, Unsupervised and Reinforcement, Learning
Laws

Unit IV: Multi-layered Networks          (10 Lectures)

Back-propagation (BP) Networks, Generalized delta rule, BP Training Algorithm and Derivation for
Adaptation of Weights, Variations in BP, Radical Basis Function (RBF) Networks, Applications of
BP and RBF Networks.

Text Books:
1. Fuzzy Sets and Fuzzy Logic: Theory and Applications, G. Klir abd B. Yuan, Printice Hall of India
2. Neural Networks and Fuzzy systems,: A Dynamical System Approach to Machine Intelligence,
   Printice Hall of India
3. Neural Networks in Computer Intelligence, Limin Fu, Mcgraw Hill International
4. Adaptive Recognition and Neural Networks, Yoh-Han Pao, Addison Wesley
5. Introduction to the Theory of Neural Computations, John Hertz, Anders Krogh and Richard G.
   Palmer, Addison Wesley.
Advanced Communication Systems and Antennas

Unit–I: Lasers and Optical Fiber Communication Systems

Principles of Lasers, Einstein’s Coefficients, Laser Pumping, Laser Oscillator, Q- switching, Mode locking, Three level and Four level Laser Schemes, Types of Lasers: Solid state lasers, Semiconductor lasers, Applications of Lasers, Introduction to Optical Communication Systems; Optical fibers, sources and detectors; Analog and Digital systems; Modulation and Multiplexing; Power budget analysis; Synchronous optical networks (SONET/SDH); Fiber distributed data interface (FDDI).

Unit-II: Cellular Mobile Communication Systems

Concept of Cellular Communications, Cell fundamentals, Frequency Reuse Concept, Concept of Cell Cluster, Geometry of Hexagonal Cells, Frequency reuse Ratio, co- channel and adjacent channel interference, Call blocking and delay at the cell site, Various mechanisms for capacity increase, Channel Assignment Strategies, Roaming and Handoffs, Global Service for Mobile Communications (GSM): GSM services, Reference Architecture, Communications in the infrastructure, CDMA Digital cellular Standard (IS-95): IS-95 CDMA forward and Reverse Channel, Packet and Frame Formats in IS-95, Mobility and Radio Resource in IS- 95

Unit-III: Satellite Communications

Introduction to Satellite Systems; Orbiting satellites, satellite frequency bands, communication satellite systems, satellite modulation and multiple access formats; Satellite systems in India; Satellite receiving systems, G/T ratio; Satellite uplink and downlink analyses in C, Ku and Ka bands; Spot beam, multiple beam, frequency reuse; Satellite transponder; Satellite front end. Multiplexing Techniques, Global Positioning Systems (GPS), Multiplexing Techniques, VSAT and MSAT Systems, Satellite Radio

Unit-IV: Microwave Antennas

Basic Antenna Theory, Half- Wave Dipole Antenna, Antenna for low, medium and high frequencies, Effects of Antenna Height, Directional Characteristics of Antennas, Directive of Antenna Arrays, Arrays with parasitic elements, Yagi- Udda Antenna, Turnstile Antenna, Driven Collinear Antenna, Broadside Array, Vertical Array, reflectors, Antenna feed lines, Broadband Antennas: Horns, Sectoral Horns, Pyramidal Horns, Patch or Microstrip Antennas, Helical Antennas, Parabolic reflectors, Slot Antenna, Smart Antennas,

Test Books and References:
1. Microwave Principles by Herbert J. Reich, East- West Press.
3. Modern Electronic Communications by Jeffrey S. Beasley, PHI.
Semester- III

Course No. ELE-306

Laboratory–V

Marks: 80

Section I. (Experiments on Digital Signal Processing)
1. Testing of various Test signals using Matlab.
2. Study of Linear Convolution using Matlab/ Simulink.
4. Implementation of general difference equations using Matlab/C.
5. Generation of Samples of some standard signals using Matlab/C.
6. Generation of Samples of Sine and Exponential Signals using Matlab/C.
7. Computation of DFT using Radix-2 DIT FFT by Matlab/C.
9. Computation of Circular Convolution using Matlab/C
10. Computation of Magnitude and Phase Transfer Function using Matlab/C.
11. Implementation of FIR Filter using Matlab/C.
12. Some Working examples on Speech and Image Processing.

Section II. (Experiments on Control system Engineering)
1. Design & realize a proportional controller using Op-amps.
7. Write a Matlab program to find Pole, zero, residue & constant terms of a transfer function.
8. Write a Matlab program to find the transformation of transfer function to state space representation.
9. Write a Matlab program to transfer a system representation in state space to transfer function representation.
10. Write a Matlab program to find
   a. Step response of a first order system
   b. Impulse response of first order system
11. Write a Matlab program to obtain impulse, step & ramp response of a second order system.
12. Write a Matlab program to find rise time, peak time, maximum overshoot & settling time of second order systems.
13. Write a Matlab program to find unit step response of second & higher order systems. Also express the transfer function in terms of partial fractions.
14. Write a Matlab program to plot root locus of second & higher order system & hence comment on stability.
15. Write a Matlab program to plot root loci of a system defined in state space.
16. Write a Matlab program to demonstrate effect of addition of poles & zeros to a transfer function.
17. Write a Matlab program to obtain Bode plot of transfer function. Find gain margin & hence comment on stability.
18. Write a Matlab program to obtain Bode plot of a system represented in state space form.
19. Write a Matlab program to determine Polar plot of a given transfer function.
20. Write a Matlab program to draw Nyquist plot of a second & higher order system.
21. Write a Matlab program to find Nyquist plot of a system represented in state space.
Laboratory – VI

Section I. (Experiments on HDL (Hardware Description Language) and Digital System Design)

1. Use CPLD XC9572 kit to simulate, synthesize & implement following gates
   a. OR
   b. AND
   c. NOT
   d. NOR
   e. NAND
   f. XOR
   g. XNOR

2. Implement all the basic gates using universal gates on CPLD XC9572 kit.

3. Implement 8×3 encoder & 3×8 decoder on CPLD XC9572.

4. Use CPLD XC9572 kit to simulate, synthesize & implement
   a. 2×1, 4×1, 8×1 MUX
   b. 1×2, 1×4, 1×8 DE-MUX

5. Use CPLD CX9572 kit to implement
   a. Half Adder
   b. Full Adder
   c. Half subtractor
   d. Full subtractor

6. Use CPLD CX9572 kit to implement
   a. 4 bit parallel binary adder
   b. BCD adder

7. Write a VHDL programe to synthesize & simulate following Flip-Flops
   a. RS
   b. D
   c. JK
   d. T

8. Write a VHDL programe to synthesize & simulate mod N
   a. asynchrononous counter
   b. synchrononous counter

9. Write a VHDL programe to synthesize & simulate
   a. Ring counter
   b. Jonson counter

10. Write a VHDL programe to synthesize & simulate
    a. n-bit shift left register
    b. n-bit shift right register

11. Write a VHDL programe to synthesize & simulate
    a. parity generator
    b. parity checker

12. Write a VHDL programe to synthesize, simulate & implement
    a. Binary to gray code converter
    b. Binary to excess-3 code
    c. Gray to binary

13. Write a VHDL programe to synthesize, simulate & implement an 8-bit ALU.

14. Write a VHDL programe to synthesize, simulate & implement a Barrel shifter.
15. Write a VHDL program to implement RAM.
16. Write a VHDL program to synthesize & simulate aBCD counter
17. Write a VHDL program to implement parallel to serial converter.
18. Write a VHDL program to implement signal generator.
19. Write a VHDL program to synthesize & simulate PN code generator.

Section II. (Experiments on Microcontroller and Embedded System)

1. 8051 based minimum system.
2. Write an 8051 ALP to generate 10 KHz square wave on any pin of port 0.
3. Write an 8051 ALP to generate 10 KHz square wave on any pin of port 0 using interrupts.
4. 8051C I/O programming examples.
5. Interfacing of MAX 232 and RS 232 with 8051 microcontroller.
6. Working examples on counter and timer programming.
7. Baud rate programming using 8051 microcontroller.
8. Study of SBUF and SCON registers of 8051 microcontroller.
9. Study of TMOD and TCON registers of 8051 microcontroller.
10. Write an ALP in 8051C to transfer data serially in full duplex mode.
11. Interfacing of LCD with 8051 microcontroller.
12. Interfacing of Keyboard with 8051 microcontroller.
13. Interfacing of 8255 with 8051 microcontroller.
15. Interfacing of opt-coupler with 8051 microcontroller.
16. Use of assemblers and simulators.
17. Use of Keil simulation software.
18. Use of development boards of 8051 microcontroller.

Section III. (Experiments on Advanced Communication Laboratory)

1. Simulation of PCM System
2. Simulation of DPCM system
3. Simulation of DM System
4. Simulation of Transponder of Satellite System
5. Study of Uplink and Down Link System
6. Simulation of Optical Fibre Communication system
7. Study of Optical Fibre Communication system using Training kit
8. Study of lasers
9. Simulation of cellular Mobile Communication system model
10. Simulation of GSM System
11. Simulation of IS- 2000 CDMA System
12. Implementation of Spreading codes
13. Study of Digital Modulation techniques
14. Study of Antennas using available Module
15. Field visit to any Cellular Communication service provider company and main exchange
Section IV. (Experiments on Soft Computing)

1. Write a program to implement and function using Adaline with bipolar inputs and outputs.
2. Write a program to implement and function using Madaline with bipolar inputs and outputs.
3. Write a Matlab program to implement discrete Hopfield network and test for input pattern.
4. Write a Matlab program to implement back propagation network for a given input pattern.
5. Write a Matlab program to implement full counter propagation network for a given input pattern.
6. Write a program to implement art 1 network for clustering input vectors with vigilance parameter.
7. Write a Matlab program to implement fuzzy set operation and properties.
8. Write a program to implement composition of fuzzy and crisp relations.
9. Write a program to perform max-min composition of two matrices obtained from Cartesian product.
10. Write a program to verify the various laws associated with fuzzy set.
Semester- IV

Course No. ELE-401 Marks: 80

Digital Communication and Information Theory

Unit I: Information Theory (10 Lectures)
Introduction to Information Theory, Measure of information, Information content of Messages, Information sources, Markoff Model for Information sources, Information Content of a Discrete Memoryless Channel, Entropy and Information rate of Markoff sources, Joint Entropy and Conditional Entropy, Mutual Information, Discrete Communication Channels, Channel representation and Channel Matrix, Mutual information for each channel, Channel Capacity, Shannon’s Theorem, Shannon- Hartley Theorem, Bandwidth S/N Trade–off, Source Encoding, Coding Efficiency, Shannon- Fano Coding, Huffman Coding.

Unit II: Pulse Code Modulation and Equalization Techniques (10 Lectures)

Unit III: Band Pass Digital Carrier Modulation and Channel Coding (10 Lectures)
Digital modulation techniques: Generation and Detection of Amplitude Shift Keying (ASK), Frequency Shift keying (FSK), Phase Shift Keying, and Differential Phase Shift Keying (PSK and DPSK ), Quadrature Phase Shift Keying (QPSK), Minimum Phase Shift Keying (MSK), Gaussian Minimum Shift Keying (GMSK), Optimum Filter, Correlator, Probability of Error in each Scheme, Comparison of Digital Modulation Techniques. Error Control Coding: Linear Block codes, (7, 4) Linear Block Coding, Cyclic Codes, Convolutional Codes, Convolutional Encoder Representation: State representation and State Diagram, Trellis Diagram, Convolutional Decoding Representation: The Viterbi Convolutional Decoding (Brief description).

Unit IV: Wide Band Digital Communications (10 Lectures)

Text Books and References:
1. Digital Communication By Simin Hykin,
2. Digital and Analog Communication by K. Shan Mugam.
3. Digital and Analog Communication by Tomasi,
4. Digital and Analog Communication Systems by Leon W. Couch, II.Pearsons Education
5. Digital Communications By Bernard Sklar, Pearsons Education
7. Wideband Wireless Digital Communications by Andreas F. Molisch, Pearsons Education.
8. Information Theory Coding and Cryptography by Ranjan Bose, TMH.
Semester- IV

Course No ELE-402         Marks: 80

VLSI Technology

Unit I: Crystal Growth, and Epitaxy

Crystal Growth and Wafer Preparation, Electronic grade Germanium and Silicon, Zone melting process of purification, Simple purification process, Czthrolaski method. Epitaxy, Vapor phase epitaxy, Transport process and Reaction kinetics, Doping in epitaxial layers, Epitaxy equipment details, Molecular beam Epitaxy process (in brief).

Unit II: Diffusion and Oxidation

Fick’s one dimensional diffusion equation, Diffused layers, Pre deposition step, Drive- in diffusion with expression, Field aided diffusion, Diffusion system, C-V technique for profile measurement, Junction depth and sheet resistance measurement. Oxidation Techniques, Growth mechanism and Kinetics of Oxidation layers, Oxidation techniques and Systems.

Unit III: Lithography Etching

Lithography, Lithography process and Types of Lithography, Optical Lithography, Contact proximity and projection Lithography techniques, Resists, Electron beam Lithography, Electron Resists, X- ray Lithography, X- ray resist. Etching, Subtractive and Additive method of pattern transfer, Resolution and edge profiles in Subtractive pattern transfer, Selectivity and feature size control of an etching process, Plasma and chemical etching of Silicon dioxide and Various metals used for metallization.

Unit IV: Metallization and IC Technology

Contacts (Ohmic and rectifying), Physical vapor deposition, Methods of physical vapor deposition, Resistance heated evaporation, Electron beam evaporation, Inductive heated evaporation, Sputter deposition, Process and System details of PVD, Thickness measurement and monitoring. Technology, Basic consideration for IC processing, Bipolar IC technology, NMOS IC technology, CMOS IC technology, Miniaturizing VLSI circuits, Modern IC fabrication.

Text Books and References:
CMOS Circuit Design: Analog and Mixed

Unit I: PSPICE ORCAD and MOSFET Operation (10 Lectures)

An Introduction to PSPICE Orcad, Generating a Netlist File, PSPICE Schematics, Circuit description, DC circuit analysis, Transient analysis, AC circuit analysis, Overview of MOSFETs: Regions of operation, Threshold Voltage and Body Effect, Floating Gate and Bulk MOSFETs, I-V Characteristics of MOSFETs, Long-Channel and Short Channel Modeling of MOSFETs, Some PSPICE Simulation Examples on MOSFET effects and Characteristics, A brief introduction to Design layout.

Unit II: Analog CMOS Sub-circuits (10 Lectures)

MOS Switch; MOS Diode/Active Resistor; Current Sinks and Sources; Current Mirrors; Current and Voltage References; Amplifier, Differential Amplifier; Comparator; Translinear Circuits: Ideal Translinear Element, Translinear Signal representations, Translinear Principle, Translinear-loop-circuit synthesis, Various Translinear circuits, Square/divider, Square rooting; Some PSPICE Simulation Examples.

Unit III: Data Converters (10 Lectures)

Analog Versus Discrete Time Signals; Converting Analog Signals to Digital Signals; Sample-and-Hold (S/H) Characteristics; Aperture; Digital-to-Analog Converter (DAC) and Analog-to-Digital Converter (ADC) Specifications; DAC Architectures: R-2R Ladder Network DAC, Cyclic DAC; Pipeline DAC; ADC Architectures: Flash ADC; Two-Step Flash ADC, Pipeline ADC, Integrating ADC, The Successive Approximation ADC; Oversampled converters; First-Order \( \Sigma \Delta \) Modulator; Higher Order \( \Sigma \Delta \) Modulators; Some PSPICE Simulation Examples.

Unit IV: Analog Multipliers and Mixers (10 Lectures)

Text Books and References:

Computer Networks & Data Security

Unit-I: OSI Reference Model and Network Architecture: (10 Lectures)

Introduction to Computer Networks, Network Topologies: Bus, Star, Ring, Hybrid, Tree, Complete, Irregular–Topology; Types of Networks: Local Area Networks, Metropolitan Area Networks, Wide Area Networks; Layering architecture of networks, OSI model, Functions of each layer, Services and Protocols of each layer. Introduction to LANs, Features of LANs, Components of LANs, Usage of LANs, LAN Standards, IEEE 802 standards, Channel Access Methods, Aloha, CSMA, CSMA/CD, Token Passing, Ethernet, Layer 2 & 3 switching, Fast Ethernet and Gigabit Ethernet, Token Ring, LAN interconnecting devices: Hubs, Switches, Bridges, Routers, Gateways.

Unit-II: TCP/IP: (10 Lectures)

UNIT-III: Network layer (10 Lectures)

UNIT-IV: Cryptography & Network Security (10 Lectures)

Text Books and References:
2. Business Data Communications, Fitzgerald Jerry,
5. Java 2.0 Patric Norton. T.M.H
Course No. ELE-404(E2)  

Windows Programming

Unit I: (10 Lectures)

Unit II: (10 Lectures)
VB language- Data types, Variables & Constant, Arrays, Arrays as Function, Collections, Procedures, Arguments passing, Functions, and Returning Values. Control Flow statements: if- then, if-then-else, select case, looping statement: Do-loop, For-next, While-Wend, Nested Control Structure, Exit statement.

Unit III (10 Lectures)

Unit IV (10 Lectures)

Text Books and References
1. Mastering VB .NET by Evangelos Peteroutsos, WROX Publications
3. Peter Norton’s Guide To Visual Basic 6 By Peter Norton
4. Beginning Visual Basic 6 By Peter Wright, Shroff Publishers
5. Programming In Visual Basic 6.0 By Mohammed Azam, Vikas Publishing House
RF Circuit Design

Unit I: RF Fundamentals (10 Lectures)

Unit II: RF Amplifier Design (10 Lectures)
Transistor Models at Low and High Frequencies; $S$ Parameter Equations; RF MOSFETs; Diode Detectors; Amplifier Design Using Admittance Parameters; Tapped $LC$ Matching Circuits; Dual Gate MOSFET Amplifiers; Amplifier Design Using $S$ Parameters and the Smith Chart; Power Amplifiers: Load Pull Techniques; Design Examples: Switching Amplifiers, Class E Amplifiers

Unit III: RF Oscillators and Mixers (10 Lectures)
Low Noise Oscillators; Oscillator Noise Theories; Equivalent Circuit Model; Effect of Load; Optimization for Minimum Phase Noise; Oscillator Designs: Inductor Capacitor Oscillators, SAW Oscillators, Transmission Line Oscillators, Tuning, Flicker Noise; Mixers: Single Balanced Mixer (SBM), Double Balanced Mixer (DBM), Important Mixer Parameters.

Unit IV: IF amplifiers and filters (10 Lectures)
IF filters: LC IF filters, Crystal filters, Crystal ladder filters, Monolithic ceramic crystal filters, Mechanical filters, SAW filters, Filter switching in IF amplifiers, Amplifier circuits Cascade pair amplifier, Universal IF amplifier, Coupling to block filters, FM IF amplifier, Successive detection logarithmic amplifiers

Text Books:
Seminar

Each student shall individually present a seminar in the 4th semester on a topic relevant to the field of Electronics for about 30 minutes. The topic should not be a replica of what is contained in the syllabus. The topic shall be approved by the Seminar Evaluation Committee of the Department. The committee shall evaluate the presentation of students. Seminar report in the prescribed format shall be submitted to the department after the approval from the committee.

Project Work

Each student group should complete the project work in 4th semester. Each student is expected to prepare a report and a technical paper in the prescribed format, based on the project work. The paper may be prepared as per IEEE standard and can have a maximum of eight pages. Members of the group will present the relevance, design, implementation, and results of the project before an evaluation committee consisting of the guide, and three/four faculty members of the department. The evaluation committee may also carry out continuous assessment of the project through progress seminars conducted during the semester.

Industrial Training

The students are required to undergo training at some center of excellence outside the state to get additional exposure in the new and emerging trends in the discipline of. This component shall be evaluated by the host Institute through conduct of theory and practical examinations in collaboration with the teacher in-charge of the Department.
